Installation Procedure

Pressed Steel Clamp

1. Thoroughly clean the damaged area of pipe with a wire brush. This will help insure a bubble tight gasket seal.
2. Use a Narrow Clamp with a Cone Plug Gasket to seal pit holes .
3. Use a Wide Clamp with a larger, crescentshaped gasket to seal corrosion spots.
4. Place the clamp around the pipe so that the leak is fully covered by the gasket.
5. Tighten the bolts evenly to the recommended torque (see table below).
6. Pressure test the completed installation for leaks.
7. Check for leaks before leaving.
