

INTRODUCTION TO CONSTANT LEVEL LUBRICATION

Constant level oilers are designed to maintain a predetermined oil level in a sump, which is necessary for proper lubrication. If the oil level were to drop below this point, the depleted oil would automatically be replenished by the lubricator, returning it to its original level. With the use of constant level oilers, maintenance efficiencies can be increased, while minimizing maintenance costs, and the loss of production time.

The majority of constant level oilers available are adjustable, allowing for use in many applications. However, there are oilers available that do not allow for fluid level adjustability, eliminating potential installation errors. Typically, constant level oilers are mounted on the side of the equipment facing the direction of shaft rotation. Some oilers allow for bottom mounting, on the oil sump, which prevents the oiler from misfeeding during applications that contain currents and turbulence formed by slinger rings, discs, and high rotating speeds.

In most cases constant level oilers are vented to the outside atmosphere to work properly. Since these oilers are vented to the atmosphere, especially in harsh, dirty environments, contaminants are allowed to enter the lubricating oil. These contaminants are in the forms of moisture and/or particulate which are extremely damaging to oil and equipment life.

In order to combat the potential for oil contamination, the closed system oiler was developed. These oilers are effective in minimizing and eliminating the ingress of contaminants into the oil sump, especially in dirty environments. Some closed system oilers contain a pressure balancing line, which is connected from the headspace of the oil sump to an air chamber built into the surge body of the oiler. This air chamber is sealed from the outside atmosphere in order to prevent the ingress of contaminants. Additional types of closed system oilers are available that mount directly on the centerline of the oil level to be maintained. The exchange of air between the oil sump and the oiler is at the oilers base, which is mounted directly to the oil sump.

Several different types of constant level oilers are available to meet specific application needs, whether it is vented or non-vented, adjustable or nonadjustable they are an easy and effective method of maintaining proper oil level in equipment.

CONSTANT LEVEL OILERS

Opto-Matic Oiler – Glass

Opto-Matic Oiler – Plastic

Opto-Matic Closed System Oiler

Watchdog Oiler

Constant Level Oilers are used to maintain the lubricant level in piece of equipment the naturally depletes lubricant through use, wear, friction, misting or evaporation. As lubricant is depleted in equipment, such as bearings, gearboxes, or pump housings due to its natural operation and the generations of heat from friction, the level of lubricant changes. A constant level oiler can be used to maintain optimum performance.

CONSTANT LEVEL OILERS COMPARISON MATRIX

	Opto-Matic Oiler – Glass	Opto-Matic Oiler – Plastic	Opto-Matic Closed System Oilers	Watchdog Oilers
Reservoir Material	Glass Reservoir	Butyrate Plastic	Glass	Glass or Polysulfone

OPTO-MATIC® CONSTANT LEVEL OILERS

30003

Opto-Matic Oilers provide an inexpensive method to automatically maintain a constant level of oil in a pump bearing housing, gear box, or other oil sump applications. Throughout processing industries, the Opto-Matic Oiler is the industry standard. Different reservoir capacities allow use in many applications.

Stainless steel models provide long life in corrosive environments in the chemical, pulp and paper, and mining industries.

FEATURES

- One piece glass reservoir ensures proper constant level function. Compared to competitive models, there is no possibility of air leakage that would cause overflowing of the bearing housing.
- Adjustable level setting allows use in many applications
- Multiple air vent slots provide for proper functioning at all times
- Large surge chamber helps prevent overflow of oil during machine start-up or shut-down
- Side and bottom connections for simplified installation

OPTO-MATIC® CONSTANT LEVEL OILERS

Opto-Matic Oilers provide a constant level of oil in a pump bearing housing, gear box, or other oil sump applications. Different reservoir capacities allow use in many applications.

“LS”, “EH”, and “EHB” models have a large surge chamber to minimize potential of leakage during oil surge conditions.

FEATURES

- High strength, transparent, ribbed plastic reservoir provides long life and impact resistance
- Adjustable level setting allows use in many applications
- Multiple air vent slots provide for proper functioning at all times
- Large surge chamber (LS, EH, and EHB models) prevents overflow of oil during machine start-up or shut-down
- Side and bottom connections for simplified installation

SPECIFICATIONS

Max. Operating Temp.	165°F Continuous
Reservoir	Butyrate Plastic
Casting	Zinc Die Cast
Finish	Bright Zinc Plated
Internal Parts	Zinc Plated Steel

BREATHER TUBES

Breather tubes are accessories used in conjunction with vented Opto-Matic® Oilers to help eliminate vacuums created by abnormally tight bearings or pressures created by high speed bearings. The breather tube helps maintain a constant atmospheric pressure in the bearing housing.

SELECTION CHART

Model No.	Description	
30014	Type "C"	1/8 NPT Thread Wick Filter
30015	Type "E"	1/8 NPT Thread Dust Cap

Breather tubes are available for customer installed vent ports in bearing housing or piping lines.

HELPFUL TIP:

Breather tubes are ideal for use in environments that contain minimal contaminants. If contamination is a concern, the Watchdog Desiccant Breathers are an excellent choice for removing contaminants as well as allowing the equipment to breathe.

OPTO-MATIC® CLOSED SYSTEM OILERS

The Opto-Matic Closed System Oiler is designed for all types of equipment where a constant level in an oil sump must be maintained. The closed system design prevents contamination and spillage. The adjustable collar allows the oil level to be externally adjusted to the desired level. A 1/8 NPT port is provided for a vent line back to the housing to allow pressure balancing between the oiler and the housing.

FEATURES

- One piece glass reservoir ensures proper constant level function. Compared to competitive models, there is no possibility of air leakage that would cause overfilling of the housing.
- Adjustable level setting allows use in many applications
- Bottom of adjusting collar indicates actual oil level setting for easy set-up and maintenance
- Side and bottom connections for simplified installation
- 2" sight gauge for easy viewing of oil level

Opto-Matic closed system oiler with pressure balancing line

See Spectrum Opto-Matic Collars on page 12 for color coding options.

The Watchdog Oiler is designed for bearing housings, gear boxes, and other oil sump applications. It is ideal for use in the chemical processing, power generation, pulp and paper, and utility industries. The viewport provides visual indication of lubricant level and condition. Mounted on the centerline of the desired oil level, these constant level oilers do not require any adjustment or level setting.

FEATURES

- Closed system design prevents contamination and spillage
- No vent line to pump bearing housing required, simplifying installation
- 4 oz. reservoirs provide oil make-up
- Mounts on centerline of desired oil level, and does not require adjustment or level setting
- Integral viewport eliminates need for additional component

OPTO LASER LEVEL

Trico's Opto Laser Level is an innovative tool that allows for quick and easy installation of the Opto-Matic Constant Level Oiler.

With the Opto Laser Level, installation of the Opto-Matic Oiler just became more user-friendly. In conjunction with the Opto-Matic Oiler, the Opto Laser Level will produce an immediate impact on your lubrication program.

Trico gives you even more with this quick, convenient and accurate method of installing the oiler – minimizing installation, reducing downtime and eliminating confusion. The Opto Laser Level is a must for every maintenance department responsible for set-up and upkeep of equipment that uses Opto-Matic Oilers.

FEATURES

- **Reusable** – The Opto Laser Level can be used to install multiple Opto-Matics in your plant
- **Lightweight** – Weighing 0.55 lbs, this tool fits in your hand for those hard to reach installation areas
- **Easy to Read** – Take the guess work out of installation with laser level alignment and visual level indicators
- **Portable** – Each Opto Laser Level comes in water-tight, foamed-lined, hard case with a handle for safe storage and convenient when transporting to the installation site

SPECIFICATIONS

Material	Aluminum Die Cast
Finish	Powder Coated
Components	Stainless Steel
Battery Type	CR123
Battery Life	50 Hrs
Laser Class	Class IIIA Laser Beam
